

IVP Reference Master Installation Guide

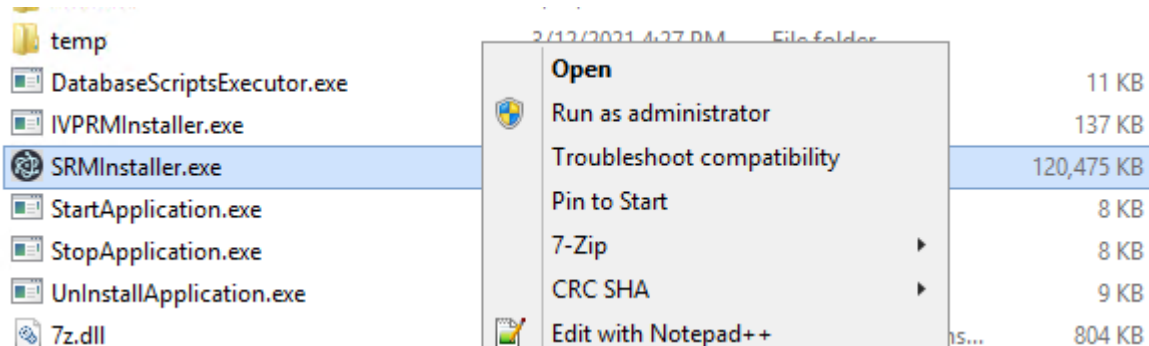

2021

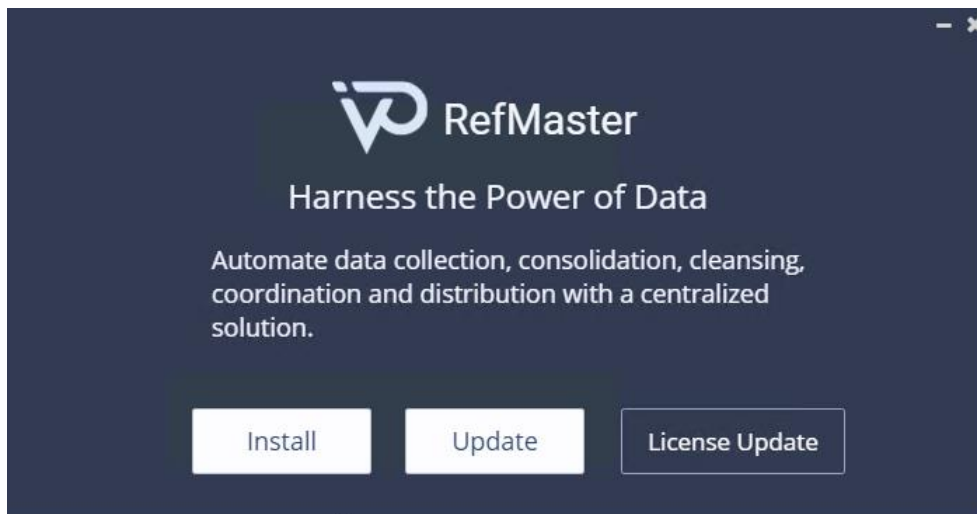

Application Installation Process

Installer will be available in <Drive:>\IVPRefMaster\Application Installer on application server. Copy the patch to <Drive:>\IVPRefMaster\Application Installer on application server. Unzip “IVP RM Installer.zip” file and place the contents of “Installer Exe's” folder to <Drive:>\IVPRefMaster\Application Installer\IVP RM Installer folder.

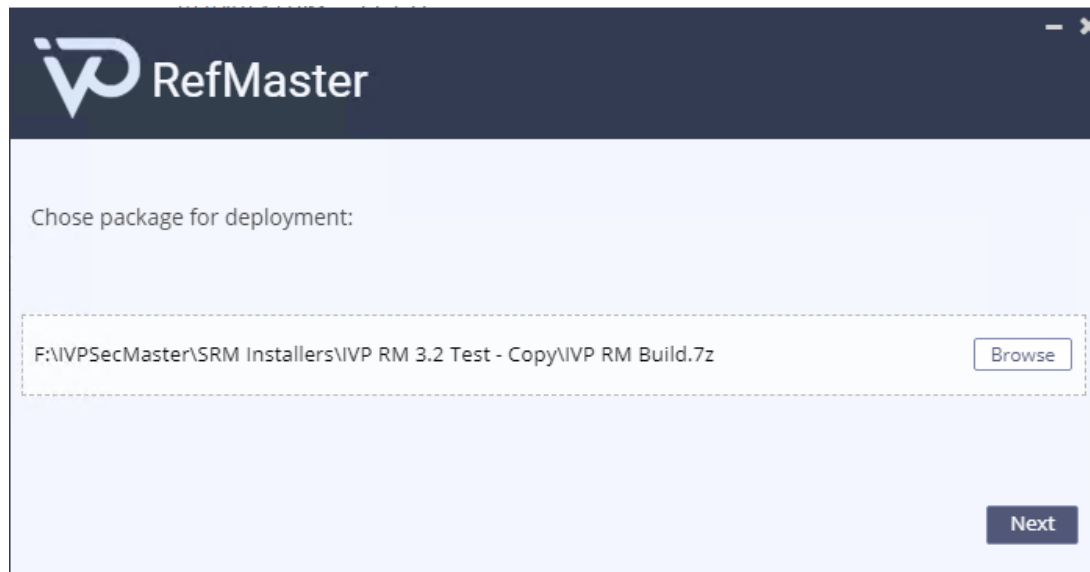

Execute “SRMInstaller.exe” with “Run as Administrator” to start the installation as shown below:

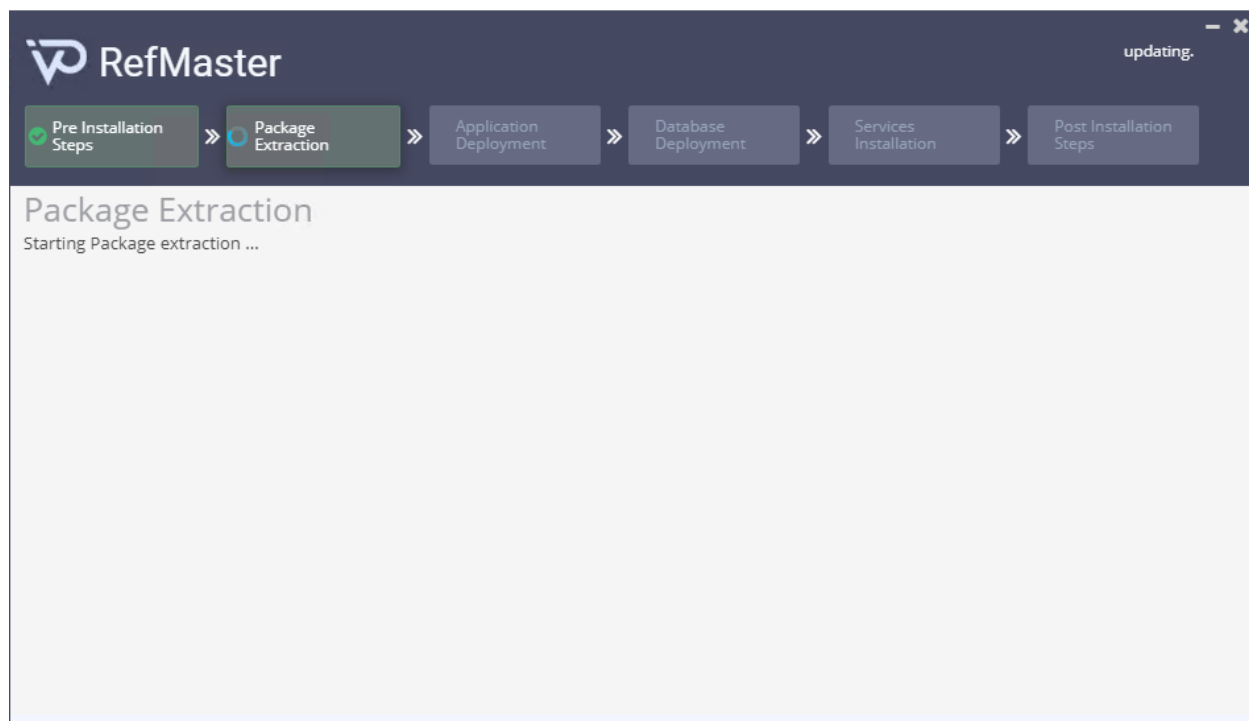

Click on Update to select the package for build installation.

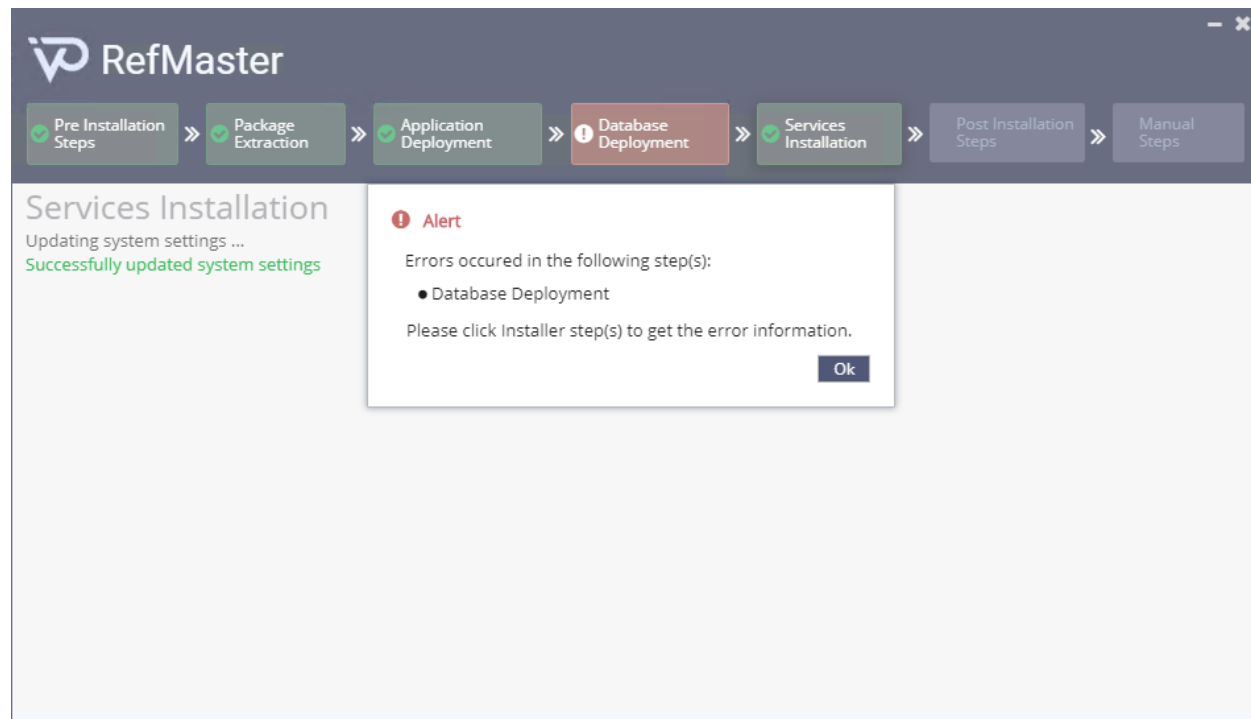

Select the package for deployment using Browse button (Change the value of PackageLocation appSetting key to “..” in IVPRMInstaller.exe.config to select latest zip file by default from the folder so that on next installation, latest zip file is selected without any changes). Click on Next to start build installation.

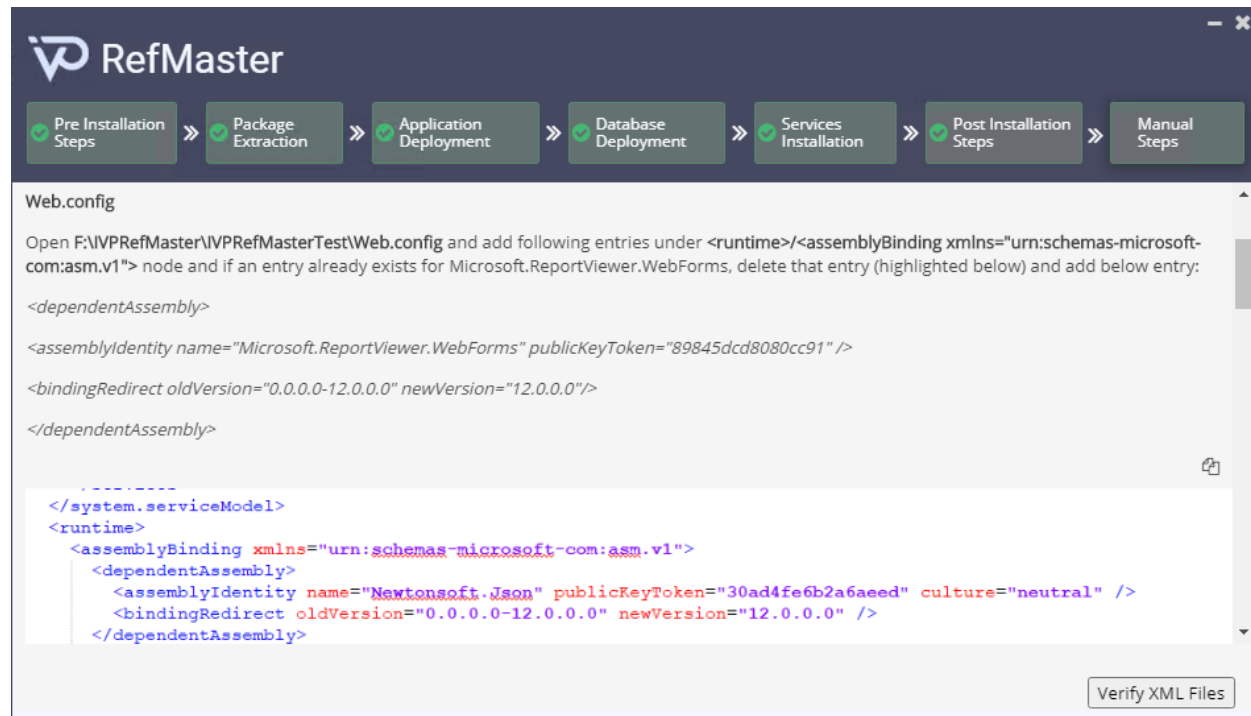

After clicking next button, installer will start deploying the application and will look as shown below:

In case installer encounters any error, it will throw error on screen as shown below:

In case installer patch also has manual config changes, “Manual Steps” tab will be enabled. Perform those changes and click on “Verify XML Files” button to complete patch deployment.

Once completed, you will have the success message on the installer.
